**Subject:** Talking points AWG telecon

- 1) "Complete" SOW and CRADA documents submitted to OGC; ready for commercial collaborator
- 2) Drafted an LOI to reach potential collaborators; working with SSWR communication team to use their broad network of contacts in the water field for posting
- 3) working on the project plan; these are considered living documents to reflect changes in the research but want to finalize the initial version. Most important item to work on are the scenarios of most interest to EPA. We will collect information from the commercial partners to develop what is called the inventory of their unit process (this activity is in the sow) but we should collectively define the most relevant scenarios for which we want to use these inventories to assess the Life cycle costs and impacts of AWG vs other approaches. Cissy Ma and myself can coordinate, but would like volunteers from this group to define relevant scenarios. (E.g. AWG vs bottled water for an emergency of what duration?)
- 4) I spoke with the CEO of WaterGen this week. I reviewed the 2 major activities within the sow; he expressed strong interest in collaborating
